EDUCATION

Bachelors of Science in Computer Science | September 2021 - December 2026

Brigham Young University - Idaho | Idaho, Rexburg ID

- Relevant course work: Machine Learning, Parallelism and Concurrency, Algorithmic and Complexity, Technical Teamwork, Applied Programming, Big Data Programming, Data Structures
- Maintained a 3.96 GPA while attending college full-time and working over 35 hours per week to self-finance education

PROFESSIONAL EXPERIENCE

Lead the Way Logistics | *Driver* | Idaho Falls ID | November 2025 - Present

- Maintained a zero-infraction performance record, receiving a \$1,000 bonus, demonstrating consistent reliability, attention to detail, initiative, and adherence to operational standards
- Performed route rescues for roughly 75% of shifts, taking over and completing remaining deliveries for other drivers, showcasing efficiency, collaboration skills, and problem-solving under tight deadlines

The Church of Jesus Christ of Latter-day Saints | *Missionary* | Fort Lauderdale & Miami, FL | August 2022 - August 2024

- Set and monitored structured weekly goals in coordination with mission leaders and peers, using progress reviews and planning tools to drive consistent performance
- Applied leadership-developed efficiency strategies in daily operations, enabling a six-person team to increase performance by 300% within six weeks, highlighting strong leadership and teamwork abilities

PROJECTS

PDI Store data Analytics

November 2025

- Leveraged Databricks and PySpark to process multi-year store data, identify customer behavior patterns, and develop a clustering model aimed at improving retention

Factorio Reinforcement Learning Mod

July 2025

- Developed a Reinforcement Learning (RL) system in PyTorch for Factorio, featuring a custom mod for environment and action space, adaptive epsilon for continuous development, action masking to prevent invalid moves, and a tailored reward function targeting iron mining and smelting

Authorship Large Language Model

June 2025

- Devised a GPT-2-style model with custom tokenization and TrueCase integration to improve results on a limited author-specific dataset, demonstrating adaptability to data provided

SKILLS

Programming languages: Python, C#, Java, Kotlin, SQL, Rust, Bash

Libraries: Pytorch, TensorFlow, Polars, PySpark, NumPy, Scikit-learn, JAX

Computer Software: Microsoft Office Suite, Git / GitHub, Docker, AWS, Databricks
